About

AI Engineer specializing in multi-agent systems, LLM pipelines, and RAG, with strong backend engineering fundamentals and a focus on building scalable, cost-efficient AI systems.

Education

Heritage Institute of Technology — BTech, Computer Science (Data Science) Aug 2023 – June 2027
GPA: 7.9/10.0

St. Lawrence High School — Higher Secondary, Science April 2021 – May 2023
Percentage: 81.4/100

Technical Skills

Languages: Python, SQL, R
AI/ML: Scikit-learn, TensorFlow, Pandas, NumPy, Hugging Face Transformers
LLM & Agents: LangChain, LangGraph, RAG Pipelines, Prompt Engineering
Backend & Systems: FastAPI, REST APIs, SQLAlchemy, Celery, Docker, Docker Compose
Databases & Vector Stores: PostgreSQL, Qdrant, ChromaDB, FAISS
Tools & Platforms: GitHub, GitHub Actions (CI/CD), Streamlit, Ollama, Gemini API, Pydantic, Pydantic Logfire

Experience

AI Intern, Blu Parrot Ventures Pvt. Ltd. — Gurugram, India June 2026 – July 2026

- Delivered a production-ready investment analytics platform in 8 weeks, measured by 10 live FastAPI endpoints integrated against a 20-table, **500K+ record schema**, by architecting the full PostgreSQL data model and backend from scratch.
- Improved forecasting reliability for client-facing risk analytics, measured against client-defined KPIs, by benchmarking and tuning Monte Carlo (**10,000 simulations**/prediction) against XGBoost.
- Cut stakeholder time-to-demo, measured by a fully integrated frontend proof-of-concept, by building the UI in Google Stitch and connecting it end-to-end with the backend and predictive models.

Document Automation Intern, SLAOS SBA — Kolkata, India May 2024 – Present

- Cut manual contract turnaround time by engineering reusable HotDocs templates with conditional logic, while administering NetDocuments repositories for metadata standards, version control, and access permissions.

Open Source Contributor, Social Winter of Code (SWOC) Dec 2024 – Feb 2025

- Ranked top 50 of 5,000+ contributors, measured by contribution quality and volume scoring, by resolving 30+ bugs across 10+ repositories spanning React frontends and FastAPI/backend logic.

Projects

Radarr — Autonomous Competitive Intelligence System github.com

- Architected a 3-agent LangGraph pipeline (Crawler → Analyst → Summarizer) with Pydantic-validated structured outputs and prompt-injection guardrails, cutting Gemini API costs **70–80%** via diff-based change detection while resisting adversarial input by design.
- Built a dual-memory RAG system (PostgreSQL + Qdrant) with full observability, instrumenting every agent call with Pydantic Logfire tracing and validating extraction accuracy through a 12-case evaluation harness.
- Containerized and shipped the complete 7-service stack (Postgres, Redis, Qdrant, Celery, Streamlit) with Docker Compose and CI/CD via GitHub Actions, delivering one-command deployment.
- *Tech: Python, LangGraph, Gemini API, PostgreSQL, Qdrant, Redis, Celery, Docker, Pydantic Logfire, GitHub Actions*

Rowans — Self-Correcting, Human-Gated Database Agent github.com

- Architected a LangGraph **Reflexion self-correction loop** (Planner→Codegen→Verifier→Critic), achieving a **95% success rate across a 40-case benchmark** via layered rule-based and LLM sanity checks with capped retries.
- Found and fixed a **prompt-injection vulnerability** letting a write bypass risk classification via a mislabeled "SELECT," redesigning the classifier to scan raw SQL directly —**verified via 5 adversarial test cases, zero unsupervised writes** post-fix.
- Built a **human-in-the-loop approval gate** enforcing separation-of-duties (approver requester) via two permission-isolated PostgreSQL roles; deployed full-stack (FastAPI, LangGraph, Streamlit) to production.
- *Tech: Python, LangGraph, FastAPI, PostgreSQL, Docker, Gemini API, Ollama, Pydantic, JWT, Streamlit*

Smart Meeting Agent — AI-Powered Meeting Intelligence System github.com

- Built a LangGraph multi-agent pipeline transforming meeting transcripts into structured summaries, action items with owners/deadlines, and persistent knowledge; engineered FAISS-backed RAG for cross-session semantic search with context-aware retrieval and source grounding.
- Delivered a production-ready full-stack application with FastAPI backend, React + Vite frontend, and REST APIs supporting transcript ingestion, AI-powered analysis, and conversational querying.
- *Tech: Python, LangGraph, LangChain, Gemini API, FAISS, FastAPI, React, Vite, Axios*
